3 Services and Applications

3.1 Data Services

The H155-381 can access the Internet through mobile networks and Ethernet networks. By connecting to the H155-381 using Wi-Fi or a network cable, users can obtain access to high-speed Internet services and establish a local area network (LAN).

3.1.1 Accessing the Internet through a Mobile Network (5G/LTE)

The H155-381 can access the Internet through mobile networks.

Figure 3-1 Accessing the Internet through a mobile network

3.1.2 Accessing the Internet through an Ethernet Network

The H155-381's LAN/WAN port can be connected to a wall-mounted Ethernet port using a network cable.

Figure 3-2 Accessing the Internet through an Ethernet network

3.2 SMS

The H155-381 supports message writing/sending/receiving and group sending (up to 50 -contacts at a time).

3.3 Security Service

The H155-381 supports comprehensive and robust security services. It provides a firewall function and PIN protection mechanisms. These features allow users to connect their computers to the Internet and simultaneously protect their computers against security threats from the Internet.

3.3.1 Firewall Service

The H155-381 supports the enabling or disabling of a firewall on the network connection, which protects the device and network from attacks by hackers on the Internet and controls access to the Internet.

3.3.2 MAC Filtering

The H155-381 supports configuration of the Media Access Control (MAC) address filtering to restrict network access.

3.3.3 Wi-Fi Authentication

The gateway supports the following user authentication protocols for Wi-Fi:

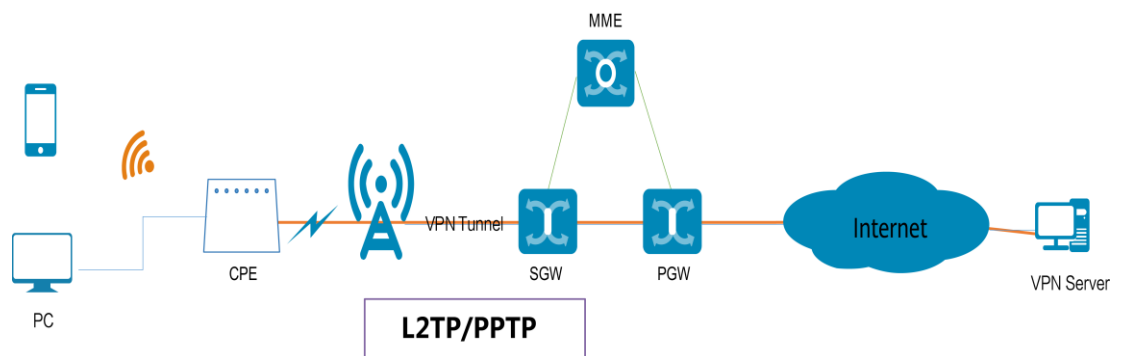

- No encryption
- WPA2-PSK, WPA3-SAE, WPA/WPA2-PSK, WPA2-PSK /WPA3-SAE.

3.4 VPN Function

3.4.1 VPN Client

VPN tunneling involves establishing and maintaining a logical network connection (that may contain intermediate hops). On this connection, packets constructed in a specific VPN protocol format are first encapsulated within some other base or carrier protocol, then transmitted between the VPN client and server, and finally decapsulated on the receiving side.

The H155-381 supports L2TP and PPTP tunneling protocols.

3.4.2 VPN Pass-Through

The H155-381 supports L2TP/PPTP VPN pass-through for the LAN side device. The LAN side device can create a VPN tunnel to the VPN server.

3.5 IP Pass-Through (Customization)

The H155-381 obtains the WAN IP address and passes it through to the PC (Case 1) or Router (Case 2), and then the PC (Case 1) or Router (Case 2) can directly use the WAN IP address.

3.6 IPv6 Only and IPv4v6 Dual Stack

3.6.1 IPv4v6 Dual Stack

The H155-381 provides dual stack function.

3.6.2 IPv6 Only (CLAT) (Customization)

The H155-381 supports IPv6 only with the transition solution CLAT for IPv4 device.

NOTE

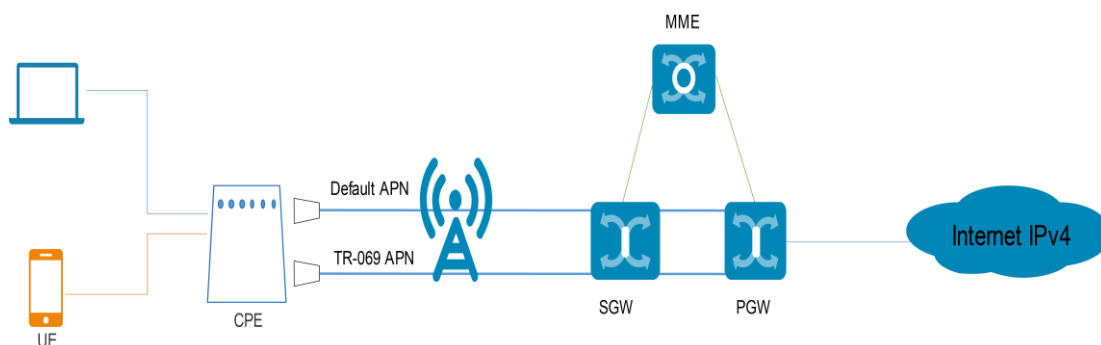

When the IPv6 only (CLAT) function is enabled, NAT-based functions (like DMZ/Port Forwarding/Port tigger) cannot be used.

When an IPv4 device accesses the Internet, the performance is degraded because packets need to be packetized and unpacked. However, IPv6 devices are not affected.

3.7 Multi-APN (Customization)

The H155-381 supports the establishment and maintenance of two APNs. These two APN connections isolate data and remote management services on an operator's network.

The H155-381 supports an independent APN for CPE internet/TR-069.

3.8 5GHz Preferred

Priority usage of 5 GHz Wi-Fi band over 2.4 GHz band when signal strength is equal to increase connection speeds.

The product will support two SSIDs when 5 GHz preferred is enabled. The first SSID includes 2.4 GHz Wi-Fi and 5GHz Wi-Fi, which provides 5 GHz preferred capabilities. The second SSID ending with '_5G' is an independent 5 GHz Wi-Fi. Customers can choose according to their needs.

The product also supports two SSIDs when 5 GHz preferred is disabled. The first SSID is only 2.4 GHz Wi-Fi, the second SSID is 5 GHz Wi-Fi ending with '_5G'. Customers can choose according to their needs.

3.9 Customer management

3.9.1 WebUI

The H155-381 supports local configuration through the Web UI. You can perform device management and network configuration to ensure normal and stable performance.

3.10 Operator maintenance (Customization)

The H155-381 supports Operator maintenance through the TR-069. Operator remote manages the CPE software update/parameters configuration via TR-069.

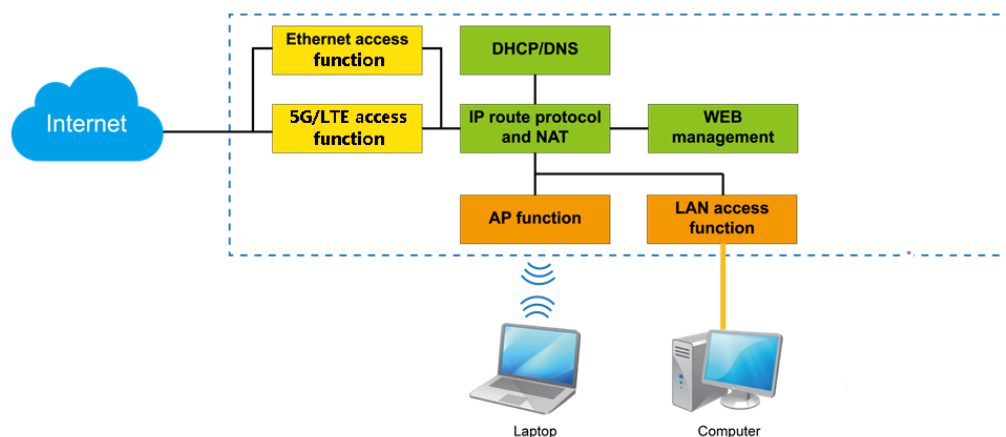

3.11 FOTA

The H155-381 supports the FOTA feature, which allows users to remotely update the device firmware through the FOTA server.

4 System Structure and Scenario Constraints

4.1 System Architecture

Figure 4-1 System structure

The following describes the modules shown in Figure 4-1.

- Ethernet access function: The H155-381 adopts the Ethernet access technology at the WAN side.
- 5G/LTE access function: The H155-381 adopts the 5G/LTE access technology at the WAN side.
- LAN access function: One 10/100/1000 Mbps high-speed Ethernet ports are provided at the LAN side. The H155-381 provides the switching function for local networking and sharing of the broadband network when it is connected to terminal devices.
- AP function: An 802.11b/g/n/a/ac/ax-compliant Wi-Fi AP interface is provided for wireless networking at home. The interface is compliant with the IEEE 802.11b/g/n/a/ac/ax standard and the WPA2-PSK, WPA3-SAE, WPA/WPA2-PSK, WPA2-PSK /WPA3-SAE security authentication mechanisms.
- DHCP/DNS: The DHCP server dynamically allocates IP addresses to PCs.
- Web-based management: You can configure the H155-381 and modify and view the configuration of the H155-381.

- IP routing protocol and NAT: The H155-381 has high-speed routing capability. With the built-in NAT, the H155-381, together with LTE terminals, can provide flexible broadband access solutions and networking schemes.

4.2 Scenario Constraints

The H155-381 is a household wireless broadband access product designed for use in scenarios with relatively few network access devices and relatively low network reliability requirements, such as homes or small office and home offices (SOHOs).

The H155-381 is not an enterprise-grade product. It cannot be used by medium- or large-sized enterprises or in scenarios with high network reliability requirements, such as banks, securities agencies, traffic control, and communications device backhaul.

The H155-381 has the following constraints:

- When the IP Pass-Through mode is enabled, the FOTA function cannot be used.
- When the L2TP/PPTP VPN client function is enabled, the throughput performance will slow down.
- A maximum of 128 devices can be connected to the Wi-Fi in theory; the actual number of devices that can be connected and served depends on actual conditions.
